Ambas as opções parecem-me bem, acho que é um excelente ideia.

Eu pessoalmente gostaria que fosse em português e algo com que o pessoal se identificasse mais facilmente e não parecer tanto uma cena gerada pela AI.

Acho que era fixe também dizer coisas internas nossas como começamos a usar nos HF por exemplo.

Cheers,

**Subject:** Protótipo AI in Focus | Technical Highlights - Opção 2

Hello,

This week's AI updates focus on tooling maturity, agent orchestration, and practical advances that directly impact developer productivity and system design.

Below is a curated breakdown of the most relevant technical developments.

## Claude

### Claude Cowork – Agent-based workflows for non-devs

- Direct read/write access to local files
- Task decomposition via coordinated sub-agents
- Generation of production-ready artifacts (Excel, PowerPoint, docs)
- Support for long-running, uninterrupted workflows

### Ralph Wiggum Plugin

- Enables long autonomous runs using Claude
- Significantly reduces human-in-the-loop requirements

- Addresses context window and execution continuity challenges  
Demos available [here](#) and [here](#).

## **Claude IDE**

- A purpose-built IDE offering a strong alternative to Claude CLI
- Improves usability, debugging, and workflow management  
Demo available [here](#).

## **CLAUDE.md best practices**

- A practical guide on structuring CLAUDE.md files to control behavior, context, and output quality.
- 

## **Cursor**

### **Improving productivity with Cursor**

- Advanced prompting workflows
  - Navigation and refactoring strategies
  - Best practices for AI-assisted development
- 

## **Industry Trends**

- [7 AI Trends to Watch in 2026](#) — a solid technical and organizational forecast.
  - [NVIDIA](#) and [McKinsey](#) provide real-world validation of agent-first operating models.
-
